Назначение

Сервисная Шина «Highway SB» служит для управления и организации асинхронного взаимодействия между приложениями. Шина предоставляет удобные механизмы организации передачи сообщений между программными сервисами.

Управление

Для управления сервисной шиной существует специальный программный модуль - приложение «Административное приложение». Модуль служит, в первую очередь, для подключения систем (клиентов) к сервисной шине и отключения от неё, а также для организации подписки на события и сообщения.

Взаимодействие с клиентами

Отправка сообщения осуществляется путём обращения к сервису системной шины посредством протокола SOAP. Доставка же сообщений может осуществляться двумя способами:

• Опрос сервисной шины. Клиент самостоятельно опрашивает шину.

• Callback. Шина по заранее установленному адресу, оповещает клиента.

Техническое описание сервиса шины

Сервис шины предоставляет набор процедур для передачи и приёма сообщений. Сообщение при этом представляется в форме одного из следующих типов данных:

- MessageForESB
 - o Body: String тело сообщения
 - о MessageTypeID: String идентификатор типа сообщения
 - o ClientID: String идентификатор отправителя
 - o Attachment: Byte[] бинарные данные, приложенные к сообщению
 - o Priority: Int приоритет, определяющий порядок доставки сообщений
- MessageFromESB
 - o Body: String тело сообщения

- о MessageFormingTime: DateTime дата формирования сообщения
- MessageTypeID: String идентификатор типа сообщения
- o SenderName: String наименование отправителя.
- o GroupID: String идентификатор группы
- o Attachment: Byte[] бинарные данные, приложенные к сообщению

Ниже приводится описание процедур, предоставляемых сервисом шины.

Метод SendMessageToESB

Принимает сообщение от клиента.

Входные параметры:

• Message: MessageForESB — отправляемое сообщение.

Возвращаемое значение:

Нет

Метод GetCurrentMessageCount

Возвращает количество недоставленных сообщений для указанного клиента.

Входные параметры:

• ClientID: String — идентификатор клиента

Возвращаемое значение:

• CurrentMessageCount: Int — количество недоставленных сообщений для указанного клиента

Метод GetCurrentThisTypeMessageCount

Возвращает количество недоставленных сообщений определённого типа для указанного клиента.

Входные параметры:

- ClientID: String идентификатор клиента
- MessageTypeID: String идентификатор типа сообщения

Возвращаемое значение:

• CurrentThisTypeMessageCount: Int — количество недоставленных сообщений указанного типа для указанного клиента

Метод GetMessageFromESB

Возвращает следующее сообщение указанного типа из очереди недоставленных сообщений.

Входные параметры:

- ClientID: String идентификатор клиента
- MessageTypeID: String идентификатор типа сообщения

Возвращаемое значение:

• Message: MessageFromESB — полученное сообщение

WSDL сервиса шины

Использование механизма Callback

Callback-сервис реализуется клиентом Сервисной Шины "Highway SB" для того, что-бы принимать адресованные этому клиенту сообщения сразу после их поступления, а не по запросу. Схема данного взаимодействия приведена ниже:

Для того, что-бы шина могла передать сообщение в callback-сервис он должен реализовывать определённый интерфейс (контракт) и принимать сообщения по протоколу SOAP.

Контракты, реализуемые Callback-сервисом

Метод AcceptMessage

Общие сведения

Код операции	AcceptMessage
Наименование операции	Получение сообщения
Назначение операции	Принимает сообщение от Сервисной Шины "Highway SB"
Action запроса	http://tempuri.org/ICallbackSubscriber/AcceptMessage
Action ответа	http://tempuri.org/ICallbackSubscriber/AcceptMessageResponse

Описание входных параметров

MessageFromESB

Имя параметра	Описание параметра	Обязате	Тип
		льность	
MessageFromESB	Обёртка сообщения	+	Контейнер
Attachment	Двоичные данные сообщения	_	Массив байт
Body	Тело сообщения	_	Строка
GroupID	Сообщение сервисной шины	_	Строка
MessageFormingTime	Время формирования сообщения	+	Строка
MessageTypeID	ID типа сообщения	+	Строка
SenderName	Наименование отправителя	+	Строка
Tags	Теги сообщения	_	Контейнер-
			список
KeyValueOfstringstring	Тег (может повторяться)	_	Контейнер
Key	Наименование тега	+	Строка
Value	Значение тега	+	Строка

Описание выходных параметров

Метод не возвращает никаких данных.

Контрольные примеры

Метод GetSourceId

Общие сведения

Код операцииGetSourceldНаименование операцииВозврат ID клиентаНазначение операцииВозвращает ID, под которым клиент зарегистрирован в Сервисной Шине "Highway SB"Action запросаhttp://tempuri.org/ICallbackSubscriber/GetSourceldAction ответаhttp://tempuri.org/ICallbackSubscriber/GetSourceldResponse

Описание входных параметров

Метод не принимает никаких параметров.

Описание выходных параметров

GetSourceIdResult

Имя параметра	Описание параметра	Обязате льность	Тип
GetSourceIdResult	ID клиента	+	Строка

Контрольные примеры

Запрос

Omeem

Метод RiseEvent

Общие сведения

Код операцииRiseEventНаименование операцииПолучение событияНазначение операцииПринимает событие от Сервисной Шины "Highway SB"Action запросаhttp://tempuri.org/ICallbackSubscriber/RiseEventAction ответаhttp://tempuri.org/ICallbackSubscriber/RiseEventResponse

Описание входных параметров

ИдТипаСобытия

Имя параметра	Описание параметра	Обязате льность	Тип
ИдТипаСобытия	ID типа сообщения	+	Строка

Описание выходных параметров

Метод не возвращает никаких данных.
